A vector space is a nonempty set of objects $V$, called vectors, which have two operations defined: addition of vectors and multiplication by scalars (real numbers), subject to the ten axioms listed below.
The axioms must hold for all vectors $\vec{u}, \vec{v}, \vec{w} \in V$ and for all scalars $c$ and $d$.

1. $\overrightarrow{\mathbf{u}}+\overrightarrow{\mathbf{v}} \in V$
2. $\overrightarrow{\mathbf{u}}+\overrightarrow{\mathbf{v}}=\overrightarrow{\mathbf{v}}+\overrightarrow{\mathbf{u}}$
3. $(\overrightarrow{\mathbf{u}}+\overrightarrow{\mathbf{v}})+\overrightarrow{\mathbf{w}}=\overrightarrow{\mathbf{u}}+(\overrightarrow{\mathbf{v}}+\overrightarrow{\mathbf{w}})$
4. There exists a vector $\overrightarrow{\mathbf{0}} \in V$ such that $\overrightarrow{\mathbf{u}}+\overrightarrow{\mathbf{0}}=\overrightarrow{\mathbf{u}}$
5. For all $\overrightarrow{\mathbf{u}} \in V$, there is a vector $-\overrightarrow{\mathbf{u}} \in V$ such that $\overrightarrow{\mathbf{u}}+(-\overrightarrow{\mathbf{u}})=\overrightarrow{\mathbf{0}}$
6. $c \vec{u} \in V$
7. $c(\overrightarrow{\mathbf{u}}+\overrightarrow{\mathbf{v}})=c \overrightarrow{\mathbf{u}}+c \overrightarrow{\mathbf{v}}$
8. $(c+d) \overrightarrow{\mathbf{u}}=c \overrightarrow{\mathbf{u}}+d \overrightarrow{\mathbf{u}}$
9. $c(d \overrightarrow{\mathbf{u}})=(c d) \overrightarrow{\mathbf{u}}$
10. $1 \overrightarrow{\mathbf{u}}=\overrightarrow{\mathbf{u}}$
