

## Some Big Ideas, Week 9

Mar 25 – Mar 29, 2024

- ⊙ **Definition:** Let  $A$  and  $B$  be sets. A **relation  $R$  from  $A$  to  $B$**  is a subset of  $A \times B$ .  
If  $(a, b) \in A \times B$ , we say  **$a$  is related to  $b$  by  $R$** , denoted  $aRb$ , iff  $(a, b) \in R$ .  
 $A$  is the **domain** of  $R$ , and  $B$  is the **codomain** of  $R$ .
  
- ⊙ **Note:** Any function  $f : A \rightarrow B$  defines a relation  $R$  by  $aRb$  iff  $b = f(a)$ .
  
- ⊙ **Definition:** A **relation on a set  $A$**  is a relation from  $A$  to  $A$ .
  
- ⊙ **Definition:** Let  $R$  be a relation on a set  $A$ .
  - $R$  is **reflexive** iff for all  $a \in A$ ,  $aRa$ ,  
or equivalently, for all  $a \in A$ ,  $(a, a) \in R$ .
  - $R$  is **symmetric** iff for all  $a, b \in A$ , if  $aRb$  then  $bRa$ ,  
or equivalently, for all  $a, b \in A$ , if  $(a, b) \in R$  then  $(b, a) \in R$ .
  - $R$  is **transitive** iff for all  $a, b, c \in A$ , if  $aRb$  and  $bRc$  then  $aRc$ ,  
or equivalently, for all  $a, b, c \in A$ , if  $(a, b) \in R$  and  $(b, c) \in R$  then  $(a, c) \in R$ .
  
- ⊙ **Definition:** Let  $A$  be a set and  $R$  a relation on  $A$ . Then  $R$  is an **equivalence relation** iff  $R$  is reflexive, symmetric, and transitive.
  
- ⊙ **Definition:** Let  $A$  be a set and  $R$  an equivalence relation on  $A$ . For each element  $a \in A$ , define the **equivalence class of  $a$** , denoted  $[a]$ , to be the set of elements in  $A$  that are related to  $a$ :
 
$$[a] = \{b \in A \mid aRb\}$$
  
- ⊙ **Definition:** A **partition** of a set  $A$  is collection of non-empty, mutually disjoint subsets of  $A$  such that every element of  $A$  is in exactly one of the subsets.  
For example, if  $E$  denotes the even integers and  $O$  denotes the odd integers, then a partition of  $\mathbb{Z}$  is  $\{E, O\}$ .
  
- ⊙ **Theorem** (8.3.4, Epp pg 469): If  $A$  is a set and  $R$  is a relation on  $A$ , then the distinct equivalence classes of  $R$  form a partition of  $A$ .

---

Some of the resources I used in constructing the Big Ideas notes this semester are: Ernst: *Introduction to Proof via Inquiry-Based Learning*; Epp: *Discrete Mathematics with Applications, 4th edition*; Levin: *Discrete Mathematics, An Open Introduction, 3rd edition*; Sundstrom: *Mathematical Reasoning, Writing and Proof, Version 3*; and the notes of my colleague, Rachele DeCoste at Wheaton.

Check the **Tentative Weekly Syllabus** on the course webpage for the specific sections relevant for this week.
