## Work on these with your partner(s) at the board

- 1. Use Pascal's triangle to compute  $\binom{6}{2}$  and  $\binom{6}{4}$
- 2. Use the Binomial Theorem to expand each of the following:

(a) 
$$(p+q)^5$$

(b) 
$$(u - v)^4$$

(a) 
$$(p+q)^5$$
 (b)  $(u-v)^4$  (c)  $(x-3y)^3$ 

3. Find the coefficient of the given term.

(a) 
$$u^7v^3$$
 in  $(2u-v)^{10}$  (b)  $x^8y^3$  in  $(2x+\frac{y}{2})^{11}$ 

(b) 
$$x^8y^3$$
 in  $(2x + \frac{y}{2})^{17}$ 

4. Simplify each of the following:

(a) 
$$\sum_{k=0}^{11} {n \choose k} 2^{n-k} 3^k$$
 (b)  $\sum_{k=0}^{11} {n \choose k} 4^k$ 

(b) 
$$\sum_{k=0}^{11} \binom{n}{k} 4^k$$
