

Work on these with your partner(s) at the board

1. Define a sequence by $a_1 = 1, a_2 = 3,$ and $a_n = 3a_{n-1} - 2a_{n-2} \forall n \in \mathbb{N}, n \geq 3$
 - (a) Compute the first six terms of the sequence, i.e, a_1, \dots, a_6
 - (b) Form a conjecture for the value of a_n that depends only on n
 - (c) Use strong induction to prove your conjecture

Ernst, Exercise 4.27

2. Define the Fibonacci sequence by
 $f_0 = 0, f_1 = 1,$ and $f_n = f_{n-1} + f_{n-2} \forall n \in \mathbb{N}, n \geq 2$

(a) Compute the first six terms of the sequence, i.e, f_0, \dots, f_5

(b) Use strong induction to prove that $\left(\frac{3}{2}\right)^{n-2} \leq f_n \leq 2^n \forall n \in \mathbb{Z}, n \geq 1$

(c) Let $\varphi = \frac{1 + \sqrt{5}}{2}$ and $\psi = \frac{1 - \sqrt{5}}{2}$. Prove that $f_n = \frac{\varphi^n - \psi^n}{\sqrt{5}} \forall n \in \mathbb{Z}, n \geq 0$

Based on Ernst, Exercise 4.29
